# INTERVIEW ORBIT

An individual alternative project for **Software Architecture – Online**, Full Sail University. Prepared for Jason Hinders by Brandon Thoreau Kelly.

Status: proposed alternative coursework. Not yet approved. This does not waive team participation, required submissions, or course policy.

## THE REQUEST

I am requesting approval to complete Interview Orbit as an individual Software Architecture project because I am unable to participate consistently in the assigned team workflow. I propose a two-week deliverable consisting of a working interview-practice vertical slice, documented architecture and design decisions, a verification report, and a reproducible demo.

From the V002 project standard, p. 11. Window: 14–27 October 2026.

## DECISIONS NEEDED FROM YOU

**Q1** **Can I complete this as an individual alternative?**

Approved, revise scope, or not approved.

**Q2** **Which team-rubric elements still apply?**

For example peer reviews, stand-ups, or a shared repository. I will map evidence to the real rubric item by item.

**Q3** **Is a client-only architecture acceptable?**

The app is a layered browser client with a storage interface. Sessions save to the browser's own database. A server API is fully specified but not built. If a running server tier is required, I will build a small API against the same contract this week.

**Q4** **Submission format and date.**

Is 27 October right? Should I submit a repository link, a ZIP, or both, and a 2–4 minute recorded walkthrough?

## WHAT EXISTS TODAY

The original prototype's source code could not be recovered, so the app was rebuilt from the plan between 15 and 16 October. Everything below is in a Git repository with an append-only evidence log.

| 6 | 8 | 62 | 30 | 3 |
|---|---|---|---|---|
| screens: dashboard, practice, recorder, results, history, session detail | curated interview prompts in 5 categories | unit tests passing, including architecture rules | end-to-end test runs passing at desktop and 360 px | ADRs, plus diagrams and a data contract |

## CHECKLIST STATUS

| | P0 ITEM (V002, P. 3) | STATUS | NOTE |
|---|---|---|---|
| 01 | Source audit and clean local run | ● With limits | Original source missing; rebuilt. Windows run pending |
| 02 | App shell and design tokens | ● Done | Contrast checked by an automated test |
| 03 | Prompt and practice selection | ● Done | 8 prompts |
| 04 | Audio recording states | ● With limits | Tested with a simulated microphone; real-mic check pending |
| 05 | Honest transcript and demo handling | ● Done | Typed, labelled demo, or none. No speech-to-text |
| 06 | Deterministic feedback | ● Done | Formulas shown on screen; no AI scoring |
| 07 | Save, list, open, delete | ● With limits | Stored in the browser, not on a server |
| 08 | Architecture documentation | ● Done | Context, container, 2 sequence diagrams, 3 ADRs |
| 09 | Accessibility and regression pass | ● Partial | Automated checks pass; manual screen-reader pass pending |
| 10 | Demo and delivery packet | ● Partial | README done; walkthrough, release and link pending |

## LIMITS, STATED UP FRONT

- **No speech-to-text.** The student types what they said, or uses a sample text that is labelled "DEMO / SAMPLE – not transcribed from this recording".
- **No server.** Saved sessions live in the browser on one device. The API is specified in the data contract and marked not implemented.
- **Audio is never stored or uploaded.** It exists only in the open tab for playback.
- **Not deployed yet.** The existing Netlify prototype is an earlier upload and is unchanged.

## 90-SECOND DEMONSTRATION

1. Open the Dashboard and press *Start practice*.
2. Choose a behavioural question and allow the microphone.
3. Record about 20 seconds, then stop.
4. Type the answer and read the feedback and its formulas.
5. Save, refresh the browser, and reopen the session from History.
6. Delete it. Then deny the microphone to show the recovery screen.

## PLAN TO 27 OCTOBER

| DATES | WORK |
|---|---|
| 17–18 Oct | Real-microphone and Windows checks; accessibility pass; server tier if you require it |
| 19–22 Oct | Visual polish and before/after frames; consolidated test report; defect log |
| 23–24 Oct | Staging deployment and smoke test |
| 25–26 Oct | Release candidate; record the walkthrough |
| 27 Oct | Submit link, commit, documents and walkthrough |

## INSTRUCTOR DISPOSITION

`[ ] Approved  [ ] Revise scope  [ ] Not approved`
